

SenZBar is ready to go right out of the box!

Remove the bar and meter from the box.

Insert a standard 9 Volt battery into the meter.

Install the proper trailer ball for your trailer. The bar has a 1" shank diameter.

Insert SenZBar into your standard 2" drawbar receiver.

Insert a retaining pin so the bar cannot pull out.

Plug the connector from the meter into the side of SenZBar.

Turn on the meter.

That's it!

You are ready to load your trailer and measure your tongue weight for optimum and safer trailering. The meter stands up and may be placed conveniently for easy reading if you need to adjust the tongue weight on your trailer.
